

Initiate the HandsFreeLink diagnostic self-test.

Initiates a self-test on the HandsFreeLink installed from 2006 - 2008.

Written By: David Spalding

INTRODUCTION

HandsFreeLink is Honda/Acura's bluetooth audio system for holding phone conversations. The system uses a microphone in the overhead roof console assy (also home to courtesy lights, ambient light unit, and sunglass storage), and the audio system speakers. The system was included as standard equipment from 2006 - 2008 model years.

To perform this, the car may be parked or being driven. if doing this while driving *please* keep your focus on the job of operating the vehicle safely.

It does not matter if the audio system is turned on or not.

Step 1 — Press and hold the HFL back button

- Insert the key in the ignition. Put the car power in ACC or ON.
- Locate the HandsFreeLink (HFL) controls on the left side of the steering wheel hub.
- Hold down the HandsFreeLink *back button* (hang-up/cancel) for 5 seconds.

Step 2

- The HandsFreeLink system starts a diagnostic self-test in two languages.
- The diagnostic test finishes itself and exits HandsFreeLink.

Refer to the HandsFreeLink chapter in your TSX owner's manual for more information on using the system.
